Bringing together conceptual obstacles and core concepts of evolutionary theory, this book presents evolution as straightforward and intuitive.

This volume considers the evolution and diversification of early unicellular life.

Is it accurate to label Darwin's theory "the theory of evolution by natural selection," given that the concept of common ancestry is at least as central to Darwin's theory? Did Darwin reject the idea that group selection causes characteristics to evolve that are good for the group though bad for the individual? How does Darwin's discussion of God in *The Origin of Species* square with the common view that he is the champion of methodological naturalism? These are just some of the intriguing questions raised in this volume of interconnected philosophical essays on Darwin. The author's approach is informed by modern issues in evolutionary biology, but is sensitive to the ways in which Darwin's outlook differed from that of many biologists today. The main topics that are the focus of the book—common ancestry, group selection, sex ratio, and naturalism—have rarely been discussed in their connection with Darwin in such penetrating detail. Author Professor Sober is the 2008 winner of the Prometheus Prize. This biennial award, established in 2006 through the American Philosophical Association, is designed "to honor a distinguished philosopher in recognition of his or her lifetime contribution to expanding the frontiers of research in philosophy and science." This insightful collection of essays will be of interest to philosophers, biologists, and laypersons seeking a deeper understanding of one of the most influential scientific theories ever propounded.

The book's main argument is that global social injustice is by and large epistemological injustice. It maintains that there can be no global social justice without global cognitive justice.

This is Charles Darwin's chronicle of his five-year journey, beginning in 1831, around the world as a naturalist on the H.M.S. Beagle.

The Twelve Millennial Beat of the mtDNA sequences in the "control region" portion of the theory in the book's title, plus a tremendous environmental upheaval 180,000 years ago comprise the new theory of evolution itself. However, what is most unique about us Homo sapiens devolves from the Brain Asymmetry. For the marked asymmetry of our brains allows for the specialization of the human brain into an originating right hemisphere, and the language areas in the left hemisphere. The Theory of the Origins of our Humanity is largely based on that Brain Asymmetry, and upon my "The theory of phenomenal psychology".

DISCOVER THE NEW WAY OF THINKING ABOUT OUR UNIVERSE! Intriguing facts that'll surprise you . . . Did you know? • Some scientists admit that they haven't made any major progress about how our Universe works for over 50 years. • It takes a novel approach to explain gravity as a physical phenomenon. • Take the journey into one- and two-dimensional realms of magnetism that lead to our three-dimensional world. • Find out how eddy currents are the reasons behind cryovolcanoes on the minor planet Ceres to solar flares on the Sun. • Get informed about Earth-threatening coronal mass ejections to global dust storms on Mars. In a book that is both groundbreaking and accessible, Daniel C. Dennett, whom Chet Raymo of The Boston Globe calls "one of the most provocative thinkers on the planet," focuses his unerringly logical mind on the theory of natural selection, showing how Darwin's great idea transforms and illuminates our traditional view of humanity's place in the universe. Dennett vividly describes the theory itself and then extends Darwin's vision with impeccable arguments to their often surprising conclusions, challenging the views of some of the most famous scientists of our day.
